
Energy Management System Policy

Mersin International Port is committed to continuously improving its Energy Management System and Energy Performance by using energy efficiently in container handling, container stuffing & unstuffing and conventional cargo handling processes. In order to realize this commitment, the following principles have been adopted as a policy in accordance with the energy use, consumption structure and scale:

- Within the scope of combating climate change, it will carry out studies to protect the environment, reduce energy consumption and increase energy efficiency in order to add value to the low carbon economy, which is one of the cornerstones of sustainable development, by observing national and international directives.
- Energy efficiency projects that will have a positive impact on climate change will be developed and implemented.
- The organization will make applications that are suitable for its purpose and context and which support its strategic direction and meet the needs of internal and external customers.
- Necessary actions will be taken quickly by following all applicable legal regulations and other conditions regarding energy use, efficiency and consumption.
- The determined goals and objectives will be reviewed periodically and the necessary resources will be provided to achieve them.
- Implementation of in-plant equipment, system and process designs related to energy consumption, use and efficiency in a way that will increase energy performance will be supported.
- In order to raise awareness of efficiency in our employees, necessary training and information will be provided, loss and leakage will be reduced, and energy efficiency will be ensured.
- Necessary support will be provided for the purchase of energy efficient products and services that may affect energy performance.
- Energy Performance, which is regularly reviewed, evaluated and continuously improved by the senior management, will maintain the Energy Management System and make it a corporate culture.

In order to ensure the continuity of the created system, the Energy Policy will be recorded and constantly reviewed and updated when necessary.

These policies and purposes are the most sincere commitment of our company.
